

DENGUE FEVER

Dengue Fever is on the rise — let's come together, raise awareness, and take action to protect our community

Spotlight on Dengue: Mapping Malaysia's Top States

Total Cases and Lives Lost in 2023

The number of **DEATHS** has been increasing over the past three quarters, with **35** deaths reported in the last quarter of 2023 (Oct – Dec). This issue can be attributed to **delayed diagnosis and treatment**

The total number of reported **CASES** in 2023 is **122,995** showing that no action is taken to reduce the number.

DID YOU KNOW

Dengue is a viral infection transmitted by mosquitoes, particularly the *Aedes* species. These mosquitoes are active during the day and can be found in both urban and suburban areas.

Dengue mosquitoes have a nose for trouble! They're attracted to the smell of human skin and the carbon dioxide we exhale.

Who Dengue Hits Hardest in Malaysia?

Children are likely to get dengue due to developing immune systems, making them **vulnerable to Aedes mosquito bites** and **increasing the risk of transmission**.
